Reg.No   : **21PCS510**

ABSTRACT

Online College Subject Management System provides a simple interface for maintenance of subject information. It can be used by educational institutes or colleges to maintain the records of subjects easily. The staff can verify the information regarding the student's attendance, marks of the students and any information regarding the subjects they handle. The students can use their dashboard to access the staffs subject along with their mobile numbers. The administrator also manages the faulty accounts like entering a new faculty assigning the faculty to the subjects. The Administrator also updates the college related information about events that occur in the college. The main objective of the module is to generate the subjects for each course and connect the staffs for them. The staffs can later access their subject details through the secure dashboard using staff login. The subject information later will be used in examination module. The students can also verify the subject marks in their dashboard under result section. So, it is better to have a web based subject management system. All the faculty and management can get the required information without delay. This system is essential in the colleges/hostels and universities.
